## OVERVIEW

### TRIPLE OFFSET BUTTERFLY VALVE

Tri Lok®-Cx is the premier isolation valve for operation in light vacuum to high-pressure applications. The non-rubbing, metal-to-metal seal delivers zero-leakage bidirectional shutoff with minimal torque, and is certified firesafe. Compared to gate, globe, or ball valves of the same size and pressure class, Tri Lok®-Cx provides space and weight savings, while minimizing installation and maintenance costs.

### APPLICATIONS

- > Steam distribution
- > Industrial gases
- > Tank farms and storage
- > Hydrocarbon processing
- > Petrochemical processing
- > Chemical processing
- > Hydrogen service
- > Reactor isolation
- > Loading and unloading
- > Safety related applications
- > Flare systems
- > Emergency shutdown (ESD) applications

### SPECIFICATIONS

<b>Size Range<sup>1</sup></b>	DN 80 to 600
<b>Temperature Range<sup>2</sup></b>	-60°C to 400°C
<b>Pressure Rating</b>	PN 10   PN 25   PN 40
<b>Body Style</b>	Lug   Double Flanged
<b>Tightness Test<sup>3</sup></b>	Zero-leakage EN 12266 Rate A

#### NOTES

- 1 Larger sizes available on request.
- 2 Other temperatures available on request.
- 3 All valves tested bidirectionally.

### DESIGN STANDARDS

<b>Valve Design</b>	EN 12516-1   EN 12569   EN 593
<b>Material Standard</b>	EN 16668   AD2000 W0
<b>Marking</b>	EN 19   DIN EN IEC 61406   DIN 91406
<b>Top Flange</b>	ISO 5211
<b>Flange Drilling</b>	EN 1092-1
<b>Face-to-Face</b>	EN 558
<b>Testing Standard</b>	EN 12266-1 & 2   NE 167
<b>AutoID/ID Link</b>	DIN 91406/IEC 61406

### MATERIAL OPTIONS<sup>1</sup>

<b>Body</b>	Carbon Steel Stainless Steel
<b>Disc</b>	Carbon Steel Stainless Steel
<b>Seat</b>	Stainless Steel (Hardened)
<b>Seal Ring</b>	Laminated: Duplex Stainless Steel + Graphite Solid Seal: Duplex Stainless Steel
<b>Stem</b>	410 Stainless Steel XM-19 (Nitronic® 50)

#### NOTE

- 1 Other materials available upon request.

### CERTIFICATIONS & APPROVALS

<b>Certifications</b>	CE: PED 2014/68/EU SIL 3 capable UKCA
<b>Fire Test</b>	ISO 10497
<b>Fugitive Emissions</b>	ISO 15848-1 TA-Luft 2021
<b>Approvals</b>	ATEX 2014/34/EU

Tri Lok®-Cx valves provide a wide range of solutions across the chemical sector.

## REFINERIES

Used to control the flow of various fluids, including crude oil, refined petroleum products, and intermediate chemicals.

- > Commonly used in process units such as distillation columns, reactors, and fractionation towers.

## PETROCHEMICAL PLANTS

Crucial in the handling of a wide range of chemicals, including acids, solvents, and hydrocarbons.

- > Commonly used in processes such as polymerization, cracking, alkylation, and catalytic reforming.

## GAS PROCESSING PLANTS

Vital in natural gas processing plants for controlling the flow of gases, such as methane, ethane, propane, and butane.

- > Commonly used in processes like gas separation, dehydration, and compression.

## CHEMICAL REACTORS

- > Regulates the flow of reactants, catalysts, and heat transfer fluids.

## TANK FARMS AND STORAGE TERMINALS

- > Controls the flow of liquids and gases during storage, loading, and unloading operations.

## HIGH-TEMPERATURE APPLICATIONS

Suitable for high-temperature processes encountered in the chemical and petrochemical industry.

- > Handles extreme temperatures and maintains tight shut-off under challenging conditions.

## FLARE SYSTEMS

Flare systems are an integral part of petrochemical plants for safely disposing of excess gases through controlled burning.

- > Isolates and controls the flow of gases into the flare system during normal operation or emergency situations.

## EMERGENCY SHUT-DOWN (ESD) SYSTEMS

- > Integrated into emergency shut-down systems to rapidly isolate sections of a process plant during emergencies or critical events.

## FEATURES & BENEFITS

The Tri Lok®-Cx features a fully adjustable, field replaceable seat and seal system that extends overall service life, minimizes downtime, and reduces the need for costly offsite repairs or total valve replacement.

- 1 SEAT:** The hardened seat reduces the risk of galling, offering superior performance and durability.
- 2 SEAL RING:** Offers a flexible design and wide range of materials to provide torque-loaded sealing with zero-leakage.
- 3 LIVE LOADED STEM PACKING:** Fully adjustable, field replaceable stem seal system is certified to international fugitive emission standards.
- 4 SPLINED DISC-TO-STEM CONNECTION:** Strong, reliable connection allows for axial movement, prevents misalignment, minimizes hysteresis, and eliminates external connections.
- 5 ROBUST BLOWOUT-PROOF STEM:** The one-piece stem features a blowout prevention ring located above the packing box, outside the pressure boundary. The stem is also mechanically retained for additional protection.
- 6 INDEXED STEM:** Provides positive visual indication of disc/seal ring position after installation.
- 7 STEM BEARINGS:** Elongated to provide maximum stem support, and hardened to reduce wear.
- 8 BEARING SEALS:** Minimize ingress of media into the journal.
- 9 DIGITAL TAG:** Each valve is uniquely and easily identifiable by simply scanning the QR Code on the product identification tag in accordance to IEC 61406.

### BLOWOUT-PROOF STEM

**Blowout Prevention Ring**  
Located outside pressure boundary.

**Mechanical Retention**  
For additional blowout protection.

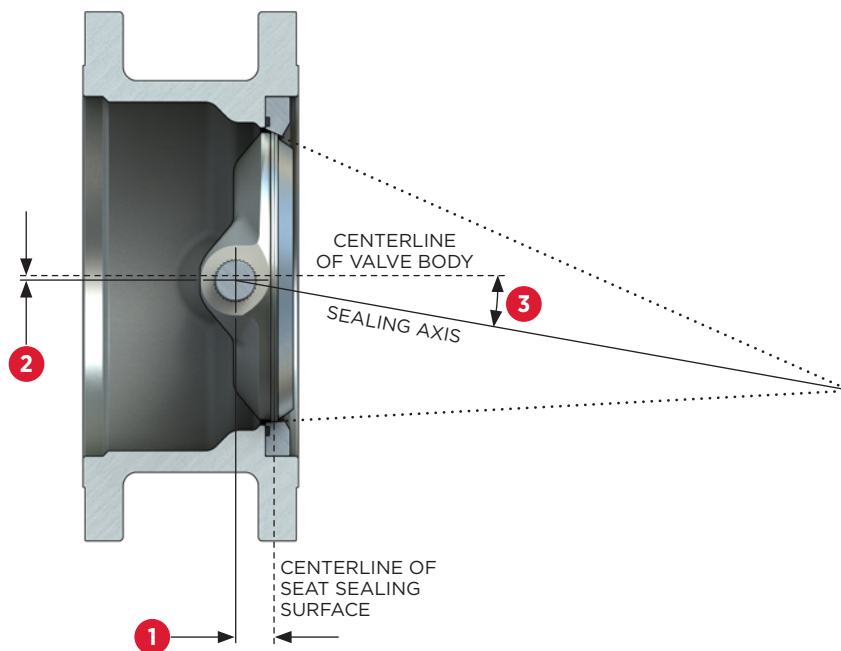

## TRIPLE OFFSET DESIGN

### TRIPLE OFFSET GEOMETRY

When a tight seal is required, a triple offset valve can be the right solution. As the name implies, three separate offsets are designed into the valve.

- 1 OFFSET 1**  
The center line of the stem is offset from the seat sealing surfaces.
- 2 OFFSET 2**  
The location of the stem is offset from the center line of the valve bore.
- 3 OFFSET 3**  
The sealing axis cone angle is offset from the center line of the valve bore.

### BENEFITS

- > Unique geometry imparts a camming action which eliminates seat/seal rubbing and wear, and compensates for extreme temperatures.
- > Torque is applied in order to create a bidirectional, zero leak, metal-to-metal seal.
- > Preserves metal-to-metal sealing integrity over the lifecycle of the valve.

### METAL-TO-METAL SEALING PRINCIPLE

The Tri Lok®-Cx non-rubbing, metal-to-metal sealing system is inherently Fire-Safe (certified to ISO 10497) while meeting zero-leakage requirements for critical applications.

**Approaching Seat**  
Seal ring makes no contact prior to seating.

**Fully Seated**  
When seated, seal ring is radially compressed into seat through torque loading.

## DESIGN FEATURES

### ENHANCED SEAT HARDNESS

Superior hardness difference between seat & seal provides high reliability and extended service life.

#### Elimination of Galling

- > Difference in hardness is important and necessary to avoid adhesive wear (galling) to both the seat and seal ring.

#### Corrosion Resistance

- > Enhanced hardening maintains a high corrosion resistance as an advantage over cobalt-based deposition in most corrosive environments.

#### Wear Resistance

- > Resistant to abrasion and erosion caused by flue gas particles, sand, molecular sieve desiccant, silica, ceramic particles, or dust.

### INDEPENDENTLY REPLACEABLE SEAT & SEAL

#### Designed for Repairability

Fully-replaceable seat and seal system provides major benefits over other manufacturers, minimizing downtime without the need for costly offsite repairs or total valve replacement.

- > Seats and seals are independently replaceable.
- > Valves can be serviced on-site with no welding, machining, or special tools.
- > Hardened seats provide superior hardness and durability.
- > Wide choice of available seat and seal ring materials for tough applications.
- > Maintenance downtime and costs are substantially reduced, extending the overall service life of the valves.

### SPLINED DISC-TO-STEM CONNECTION

#### Strongest & Most Reliable Connection

Tri Lok®-Cx triple offset valves have a superior, splined disc-to-stem connection which eliminates external pins or keys, prevents typical misalignment problems of rigidly attached discs and stems, offers maximum strength, and minimizes hysteresis.

- > Eliminates hysteresis throughout operating range.
- > Superior performance in control applications.
- > Temperature changes do not affect valve performance or connection rigidity.
- > Easy to disassemble.
- > No concentrated stress or shear points.

## OPTIONS & SPECIAL APPLICATIONS

### OPTIONS

#### Solid Seal

- > Direct replacement for laminated seal.
- > Tested to meet or exceed the requirements of EN 12266-1.
- > Available in multiple materials: Duplex Stainless Steel, Inconel®, or XM-19.
- > Ideal for applications which include particulates.
- > Suitable for applications incompatible with hydrocarbons or graphite.

Laminated Seal Ring

Solid Seal Ring

#### Lantern Rings

- > Additional ring in packing arrangement with threaded port in body neck.
- > Allows grease or sealant injection into stem packing area.
- > Ideal for applications where eliminating fugitive emissions is critical.

### SPECIAL APPLICATIONS

Bray can provide engineered solutions for your most critical applications.

#### Steam Jackets

- > Welded or bolt-on construction, available upon request.
- > Used for applications where flow media can polymerize or adhere to surfaces cooler than process.

Steam Jackets

#### Unique Automation Options

- > Tri Lok®-Cx valves are automation ready and fully compatible with Bray's broad actuation and accessory portfolio.

#### Emergency Shutdown

- > Quick acting closure.
- > Automated with Series 98 scotch yoke pneumatic actuator.
- > Optional hydraulic dampener.

#### Double Block and Bleed Configuration

- > Constructed from two triple offset valves, a spool piece, and a drain ball valve.
- > Provides ability to monitor pressure in cavity between two triple offset valves to ensure safe downstream work.

Tri Lok®-Cx shown with Series 98EH actuator with electro-hydraulic power pack.

# VALVE & OPERATOR ORIENTATION

## VALVE ORIENTATION

A horizontal stem orientation is beneficial for reducing the possibility of solid media particles depositing in the bearing areas.

Whenever possible, the valve should be installed with the stem in the horizontal position. For installations where this is not possible, the stem should be declined from vertical (as shown).

## ACTUATOR ORIENTATION

#### NOTES

- > Kv varies with the valve size, angle of opening and the manufacturer's valve style.
- > Kv value is the volume of water in cubic meters/hour (m<sup>3</sup>/hr) that will flow through a given restriction or valve opening with a pressure drop of one (1) bar at room temperature.
- > For sizes not shown, contact Bray for more information.

# FLANGE TO VALVE BOLTING DATA

## LUG VALVE WITH STUDS

## DOUBLE FLANGE VALVE WITH THROUGH-STUDS

### IMPORTANT INFORMATION

- > Refer to appropriate Bray dimensional drawings for specific valve drilling information.
- > Lug threads may be tapped from both sides, and therefore tap may not be continuous.
- > Minimum bolt engagement must be equal to the diameter of the bolt.
- > When bolting the valve into the line, use standard bolting torque as recommended by applicable piping standards. Additional force from the flange bolts is not required.

**CAUTION**  
Tapped holes at the bearing hub areas **do not** permit through-holes.

600	M27 x 3.0	160	24	140	16	64	64

**NOTES**

1. All studs are in accordance with DIN 976-1. Rounded to standard lengths.
2. All nuts are in accordance with ISO 4033 Table 1.
3. All washers are in accordance with DIN 887, Normal Series Washers.
4. Length calculations include 2 washers per stud and hex nut configuration and 1 washer per stud and hex nut (blind) configuration.
5. Standard spiral wound gaskets accordance with BS EN 1514-2, one per side, have been included in the bolting calculations.
6. Stud and hex nut (blind) specifies special stud lengths for the threaded flange bolt holes closest to the valve stem.
7. Contact Bray for any sizes or configurations not shown.
